

**The Resilience Hub** is a crucial platform for ongoing action and investment in order to address the escalating effects of climate change. It serves as a link, connecting a wide range of stakeholders, including businesses, investors, cities, members of civil society, academic institutions, and grassroots organisations. The Hub intends to spark climate-just projects and increase financial support for resilience activities by creating a welcoming and vibrant environment. Along with the **Race to Resilience Campaign** and the **2030 Agenda**, its main objective is to increase the contribution of non-state actors to resilience building.

The respective **Regional Resilience Hubs (RegHubs)** play a crucial role in delivering the overarching vision for the Resilience Hub; by ensuring the voices and perspectives of the most vulnerable and climate affected are amplified and increasingly drive the global resilience agenda in the next ten years. The respective **RegHubs** are envisioned to play a centralising role in elucidating and communicating regional priorities, actions, solutions and challenges to be amplified onto a global stage. This year, Regional Resilience Hubs will have a major role in participating from the onset in the programming of the overall Resilience Hub at **COP28**.

The Regional Resilience Hub will build a regional momentum that stays committed to the agenda. **The South Asia Resilience Hub** is presently organized by [ICCCAD](#) and the [Gobeshona Platform](#) led by ICCCAD, Bangladesh will continue to lead the R2R process for South Asia region. Information on our previous will be found here: [South Asia Regional Resilience hub](#) .

Participation and the event hosting by organisations will both be **free of cost** for the **South Asia Regional Resilience Hub** in order to actively promote participation and facilitate long-term progress. The goal of this inclusive strategy is to promote interaction without regard to cost.

#### **Purpose:**

The Regional Hub will organize a series of virtual/hybrid events in the region to bring the experience and knowledge of building resilience to the impacts of climate pre-COP 28.

#### **Objective:**

- To share best practice and build collaboration, momentum and new opportunities on adaptation and resilience.
- To help amplify messages on resilience and adaptation at COP28 and beyond.
  - To help set the direction for future action on adaptation and resilience.

#### **Focus:**

The Regional Hub will be on people & building the resilience of climate vulnerable communities by:

- \* Breaking down silos
- \* Working with nature
- \* Building resilient livelihoods and businesses
- \* Helping increase the quantity & quality of finance
  - \* Putting knowledge into use
  - \* Bringing in climate justice
